NOTE: The LV/119 O V E R T Front Plate Bag requires a Rear Bag and Cumberbund for proper operation. The LV/119 SYSTEM is a group of products that work together to give end-users the ability to scale their equipment to their current needs. The fact that this is a cohesive system means that users can mix and match accessories in most cases. For example: One could take a C O V E R T Front or Rear Plate bag and use it with an O V E R T Front and Rear Plate Bag. Users may also also cross pollinate cumberbunds, shoulder covers, and other parts that will be available. The SYSTEM encompasses many parts, some of which are currently available and some that are in development, such as Back Panels of various types, MOLLE cumberbunds, First Spear TUBES™ integrations, and different placards. The O V E R T shares the same profile as the C O V E R T plate bags but with modifications that make it more suitable for high profile operations. The front bag features a 3 Row / 4 Column MOLLE field that doubles as a 6" x 3" Velcro Field. This may be used to attach End User Devices (EUDs), such as those made by KAGWERKS or Juggernaut Defense. The Velcro may be used to mount placards, patches, and IR identifiers. The MOLLE can also be used to mount administrative pouches, frag grenade pouches, or anything else users may require quick need access to. Every front plate bag comes standard with sewn loops on the sides for attaching First Spear TUBES™ for use with our TUBES™ cumberbund. Placard and Chest Rig Integration. All LV/119 Plate Bags offer placard and chest rig integration via removable 1 Inch ITW NEXUS Buckles. These clips are removable, allowing users to reduce the signature of the plate bag if it is being worn under a cover shirt or being utilized in a low-profile role. Push To Talk Support. Each O V E R T front plate bag comes standard with a PTT/Porkchop Loop on either side. Communication Cable Routing. The Modern Warfighter and Law Enforcement Officer has a radio. To date, the majority of manufacturers have not taken end-user communications needs in to their design considerations - we endeavor to break that paradigm. The O V E R T front bag offers open shoulders to facilitate comms cable routing inside the plate bags and over the shoulders. It also offers small routing points by the 1 Inch ITW NEXUS buckles on the chest - easily accommodating PTT cable routing. Plate Fitment. The carrier was designed to fit United States Standard Issue SAPI cut plates, but it will fit other cuts as well as long as they fit within the specifications listed below. The bags were built to accommodate "thicker" plates, but they will not fit plates do not fall within the measurements listed. Medium -10" x 12.5" Large - 10.25" x 13.25" Extra Large- 11" x 14.00" Thickness - MAXIMUM of 1.20" NOTE: The LV119 Front Plate Bag is part of the LV119 Plate Carrier System. This item does not include a Rear Plate Bag, Cumberbund, Shoulder Covers, Placards, or any other accessories. Additional components are required for proper use.
