REAR OVERT PLATE BAG (X-LARGE) - BLACK

[Home](#)

OTB OVERT Rear Plate Bag The LV/119 SYSTEM is a family of products that work together to give end-users the ability to scale their equipment to their current needs. The fact that this is a cohesive system means that end-users are able to mix and match accessories in most cases. For example: One could take a C O V E R T Front or Rear Plate bag and use it with an O V E R T Front and Rear Plate Bag. Users may cross pollinate cummerbunds, shoulder covers, and other pieces of the system. The SYSTEM encompasses many parts, some of which are currently available and some that are in development. These include Back Panels of various types, MOLLE cummerbunds, First Spear Tubes™ integrations, and different placards. Over The Beach Operations are some of the most challenging and miserable operations that service members must endure. We are proud to bring a suite of products that directly results in improved load carriage and soldier survival during sea borne operations. The OTB product line is built with a mesh material, which allows for quick drainage of water and sea borne debris such as sand. OTB products will dry faster after exiting the water and will drain water faster and more efficiently as well. The mesh also makes the products simple to clean using fresh water after conducting operations in salt environments. The Over The Beach (OTB) O V E R T shares the same profile as the C O V E R T and O V E R T plate bags but with modifications that make it more suitable for seaborne operations. Most noticeable the bags are made primarily of a hydrophobic mesh material. The LV/119 O V E R T OTB Rear Plate bag was built for those who need a scalable vest to wear in a multitude of environments including seaborne operations. The O V E R T OTB shares the same profile as the O V E R T and C O V E R T plate bags, while possessing additional features that make it more suitable for operations in the water. The rear plate bag features full integration of our Recovery Handle™. The rear bag also features more MOLLE webbing than the standard O V E R T, which aids in the integration of Personal Floatation Devices (PFD's). The rear bag also features zippers that will integrate into our back panels in the future. Recovery Handle™ Integration Full integration of our Recovery Handle™. NOTE: The Recovery Handle™ is NOT included with this product. Back Panel Support The rear bag also features minimal MOLLE webbing and Zippers for integrations with our Zip-on panels. Note: The back panel integration is proprietary and will not support other brands of back panels. Communications Cable Routing The Modern Warfighter and Law Enforcement Officer has a radio. To date, the majority of manufacturers have not taken end-user communications needs into their design considerations - we endeavor to break that paradigm. The O V E R T offers open shoulders to facilitate commo cable routing inside the plate bags and over the shoulders. Cables may also be routed through the cummerbund access. Cummerbund Attachment The cummerbund attachment is a proprietary system that allows for the use of all of our cummerbunds, as well as allowing for a wide range of adjustment. The cummerbund attaches inside the plate bag, which is advantageous for a few reasons. There is no external mounting that can get snagged or rip off when exiting vehicles in haste. The design creates a smooth profile when worn underneath clothing. Velcro is not utilized as an attachment method on the rear plate bag. Velcro wears out over time and is a generally less-than-optimal attachment method when not supported in other ways. Velcro doesn't handle weight well and it sticks to everything, especially cloth
